PROJECTS

CodeFetch | Live | Github | Video |

A Chrome extension enabling one-click hover to inspect HTML/CSS, extract assets (images, videos, SVGs), and copy ready-to-use code snippets from live websites.

TECH STACK -> *JavaScript, HTML, CSS, and Chrome APIs*

- Developed a Chrome extension using **JavaScript, HTML, CSS, and Chrome APIs** to help students and junior developers extract assets and code from any website.
- Enabled **one-click extraction** of all website assets including images, videos, and SVGs using Chrome's **scripting** and **storage** APIs.
- Built a **hover-to-inspect feature** that displays and copies HTML/CSS of any element instantly for faster learning and prototyping.
- Tested and deployed on multiple websites to ensure **compatibility and security** under **Manifest V3** standards.

Manime | Live | Github |

An online anime website to find details of your favourite anime.

TECH STACK -> *ReactJS, TailwindCSS*

- Implemented features such as **"Add to Favourites"** and **"Watch Later"**, with persistent localStorage support for personalized user experiences.
- Built dynamic routing and detail pages using **React Router**, enabling smooth navigation and detailed views of anime metadata.
- Applied **TailwindCSS** for a modern UI, featuring grid layouts, hover animations, and filterable cards for optimal user interaction.

Profiles	*Technical Skills*
